

Independent Fork Positioner

Independent Fork Positioners - A fork positioner is a tool made out of high quality materials designed to be able to endure the most challenging procedures and work environments. This particular piece of equipment can enable drivers to be able to maneuver the blades hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the entire load or the arms in order to facilitate much more accurate carrying and placement in a faster and more efficient way.

The unique fork pocket design enables operators to securely swing the unit's forks without any worry of destroying the positioning cylinders. This can allow the operator the choice to either execute simultaneous or independent blade movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be transformed into fork positioners on available units.
