The U.S. forklift division located in Cleveland has a skilled team knowledgeable in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Korea's original domestic lift truck marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled lift trucks as part of a national machinery expansion venture. Initial product sales of this industrialized equipment focused on large business groups, the armed forces and on state-run firms. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical instruction grew to become the new focus for enhancing quality and product development.

Home-based forklift trade for Daewoo started in 1967 and grew to an amazing 90% market share in Korea. By the 1980's, Daewoo's progressive technological enhancements combined with sales success placed them in a position of considerable growth of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to help them in the highly competitive North American materials handling industry. This joint-venture proved highly lucrative for Daewoo and their lift truck sales expanded greatly. In 1984, the company completed construction of a new facility to help in producing high end value-added products for export. In 1993, the company had a international sales network and started exporting versions they had established through in-house expertise, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into overseas marketplaces.
